

AIAP Data Protection, Accessibility, and Evidence Governance

Governance requirements for assessment evidence, authentication, prompt security, and appeal

AIAP Release 6.5 | August 2026

Version-matched to the AIAP Core Working Paper v6.5 (Canonical Edition).

Contents

1. Governing principle.....3

2. Evidence inventory.....3

3. Prompt and assessment-security information.....3

4. Recordings and remote controls.....3

5. Accessibility-equivalent evidence.....3

6. Student notice and access.....3

7. Minimum appeal rights.....3

8. Capacity and incident degradation.....4

9. Retention schedule template.....4

10. Governance checklist.....4

1. Governing principle

Collect only evidence that materially supports the learning claim, validity argument, quality assurance, appeal protection, or a lawful institutional obligation. Documentary abundance is not assurance. Local legal, institutional, ethics, accessibility, and records-management review remains necessary.

2. Evidence inventory

For every evidence object record purpose, minimum necessary form, claim scope, source, directness, access roles, retention, correction route, challenge status, security class, disposal, and requalification trigger. Separate product, identity, competence, provenance, workflow, prompt, recording, accommodation, integrity, and appeal evidence.

3. Prompt and assessment-security information

Prompt banks, form blueprints, exposure windows, allocation methods, rotation/retirement rules, exposure incidents, and form-equivalence evidence are controlled assessment-security records. Access should be limited to people who require it. Credible circulation triggers containment, retirement, review of affected decisions, and requalification. Public reporting should describe failure classes and controls without publishing operational attack details.

4. Recordings and remote controls

Recording, camera, screen-sharing, browser controls, and identity data must be necessary and proportionate to the claim and threat model. Use the least intrusive sufficient control. State lawful/institutional basis, access, retention, correction, deletion, and an equivalent route where surveillance would create disproportionate or construct-irrelevant burden.

5. Accessibility-equivalent evidence

An alternative route must target the same declared construct and decision, not merely look similar. Map criteria and load-bearing competence components across formats, pilot the route where possible, compare decision behavior, and record residual differences. Accommodation information should be separated from the scored evidence except where strictly necessary.

6. Student notice and access

Students should receive concise notice of what is collected, why, who can access it, how long it is retained, how to correct factual errors, how to request an equivalent route, and how to appeal. Notice should not turn the student into the sole custodian of complex compliance rules.

7. Minimum appeal rights

For a consequential authentication decision, the student should have access, subject to lawful and proportionate limits, to the applicable rubric, decision rationale, recording or assessor notes where they exist, and a review by a qualified person not involved in the original decision. A rehearing or equivalent reassessment should be available where procedural unfairness, technology failure, accessibility failure, prompt compromise, or material recording loss is established.

8. Capacity and incident degradation

Record assessor illness, mass rescheduling, technology failure, prompt compromise, recording loss, accessibility failure, and data incidents. Name the affected students/claims, containment, fallback route, delay or narrowing, and requalification decision. Evidence standards must not be silently lowered to protect a timetable.

9. Retention schedule template

Evidence type	Purpose	Default retention	Access	Disposal / review trigger
Authentication recording	scoring, moderation, appeal	local policy period only	named assessors, moderator, appeal authority	appeal closure or policy expiry
Assessor notes and rationale	decision trace and appeal	aligned with decision record	authorized staff and student-access route	policy expiry
Prompt bank and blueprint	security and equivalence	active life plus audit period	restricted design team	retirement/ compromise review
Exposure incident log	correction and requalification	release/policy audit period	security, QA, appeal authorities	closure plus retention rule
AI-use or workflow record	learning/ validity purpose only	minimum necessary	markers/QA as declared	purpose expiry
Accommodation information	equivalent route administration	minimum necessary	restricted accessibility roles	purpose expiry

10. Governance checklist

- ☐ Purpose and minimum necessary evidence declared.
- ☐ Sensitive and accommodation data separated and protected.
- ☐ Prompt-security records access-controlled.
- ☐ Student notice and correction route published.
- ☐ Equivalent non-surveillance route available where needed.
- ☐ Appeal evidence and second-review route operational.
- ☐ Incident, compromise, retention, and disposal triggers assigned.
- ☐ Public reporting excludes unnecessary personal or attack-enabling detail.
