

AIAP Student and Instructor Toolkit

Copy-ready briefs, records, rubrics, and moderation tools

AIAP Release 6.5 | August 2026

Version-matched to the AIAP Core Working Paper v6.5 (Canonical Edition).

Contents

1. Student-facing lane statements.....	3
Lane 1 — Secured.....	3
Lane 2A — Competence-authenticated open.....	3
Lane 2B — Open non-certifying.....	3
Lane 3 — AI-integrated open.....	3
2. Tier 1 claim-dependent record.....	3
3. Tier 2 workflow record.....	3
4. Instructor claim-profile sheet.....	3
5. Authentication prompt bank and exposure template.....	4
6. Product-authentication decision record.....	4
7. Moderation checklist.....	4
8. Programme assurance map.....	5
9. Student FAQ.....	5

1. Student-facing lane statements

Lane 1 — Secured

You will demonstrate **[capability]** under materially constrained **[named]** conditions. The assessment is designed to show what you can do personally in that setting. Approved accessibility arrangements remain available. The result does not prove every part of your historical working process was unaided.

Lane 2A — Competence-authenticated open

You may use ordinary resources, including permitted AI tools, while producing the open work. You will also complete **[authentication]**, including an unseen or changed element, so that you can explain, defend, verify, adapt, and transfer the capability being assessed. The brief will state which components are load-bearing. The authentication tests present competence, not a complete reconstruction of who produced every part of the artifact.

Lane 2B — Open non-certifying

This activity supports practice, feedback, or development. It is not being used as primary certification of **[capability]**. That capability is assessed at **[named assessment/programme point]**.

Lane 3 — AI-integrated open

Responsible AI-mediated practice is part of what is assessed. You must show how tools were used, what you verified, what you changed or rejected, which decisions remained yours, how risks were controlled, and how you would adapt the workflow to a new case.

2. Tier 1 claim-dependent record

Use only when it serves a declared purpose.

- Tool(s), if any:
- Purpose:
- What I accepted, changed, or rejected:
- Verification or source check:
- My contribution and responsibility:

3. Tier 2 workflow record

- Task and claim:
- Tools/model versions where material:
- Workflow and delegated functions:
- Representative prompts/steps:
- Retained human decisions:
- Verification and independent checks:
- Errors/biases identified:
- Rejected recommendations and reasons:
- Stop/override points:
- Data, privacy, safety, or fairness controls:
- Residual limitations and responsibility:

4. Instructor claim-profile sheet

Field	Entry
Material claim	
Stakes and use	

Field	Entry
Positive assurance object / routing status	artifact quality / present demonstrable competence / production provenance or unaided authorship / AI-integrated capability; record Lane 1 independent capability and Lane 2B non-certifying learning support as routing values
Condition and modality	controlled/open; in-person/invigilated-remote/open-remote
Lane	1 / 2A / 2B / 3
Primary/secondary AI roles	
Evidence	
Authentication; prompt/live-perturbation source; exposure window; form-equivalence evidence; submission-authentication interval	
Combination model and threshold	
Source/environmental independence	
Accessibility-equivalent route and construct map	
Reassessment; rubric/rationale access; second-review and rehearing route	
Programme map and public wording	
Requalification trigger/date	

5. Authentication prompt bank and exposure template

Prepare a balanced bank or governed live-perturbation set across explanation, defence, verification, adaptation, error diagnosis, transfer, and limits. Record prompt ID, form ID, material claim, load-bearing component, cohort, exposure window, allocation method, use count, access owner, suspected circulation, rotation/retirement rule, and form-equivalence evidence. No universal bank-size ratio applies; justify adequacy relative to the cohort, scheduling window, stakes, and threat model. Avoid prompts that reward memory, accent, speed, or confidence unless those are part of the construct.

- Explain one consequential choice and one credible alternative.
- Verify a named source or claim and state residual uncertainty.
- Diagnose a planted weakness in a new artifact or output.
- Adapt the recommendation to a changed audience, constraint, dataset, or risk.
- State when the method should be refused, narrowed, or escalated.

6. Product-authentication decision record

Choose one for certifying claims: hurdle / dual-score / integrated rubric. For Lane 2B, record non_certifying; no product-authentication combination applies.

Record construct, criteria, evidence-source map, weights, minima, compensation limits, mismatch route, second check, reassessment, integrity referral standard, moderation, and appeal.

7. Moderation checklist

- ☐ Markers calibrated on claim-targeted examples.
- ☐ Product and authentication evidence not double-counted.
- ☐ Weak authentication not treated automatically as misconduct.
- ☐ Disclosure-visible and disclosure-blind moderation compared where feasible.
- ☐ Accessibility and alternative formats reviewed for construct equivalence.
- ☐ Modality and covert-assistance risks recorded.

- ☐ Prompt exposure, rotation, retirement, and form equivalence reviewed.
- ☐ Submission-authentication interval justified.
- ☐ Group work has separately attributable individual evidence and decisions.
- ☐ Assessor qualification, session limits, breaks, and drift checks documented.
- ☐ Students can access the rubric, rationale, evidence record, second review, and rehearing route where applicable.
- ☐ Decision and public wording match the evidence.

8. Programme assurance map

Use the workbook companion to map each PLO, assessment point, lane, modality, credit/weight, individual authentication, redundancy, progression relevance, public wording, under-evidenced status, and review date.

9. Student FAQ

Does using AI automatically reduce my mark? No. Marks follow the declared learning claim and criteria. Honest, permitted use is not a penalty category.

Does a viva prove I wrote every word? No. It can support present competence; complete production provenance requires different evidence.

What if anxiety, disability, language, or technology affects the event? Equivalent routes, accommodations, reassessment, and appeal must be available.

Can weak authentication lead directly to misconduct? Not by itself. Misconduct requires separate evidence of deception, fabrication, identity breach, prohibited outsourcing, or controlled-condition violation.

Can I use AI to prepare for the authentication? Yes, unless the brief states a separate controlled preparation condition. Rehearsal is legitimate preparation. At least one element will be new or changed so the event can test adaptation, verification, reasoning, or transfer rather than memorized reproduction.

What happens if a prompt circulates before my event? Tell the programme. A compromised prompt should be retired or replaced, affected decisions reviewed, and students protected from unfair disadvantage.

What information can I access if I appeal? Subject to lawful and proportionate limits, you should receive the applicable rubric, decision rationale, recording or assessor notes where they exist, and a route to a qualified reviewer who was not involved in the original decision. A rehearing or equivalent reassessment should be available when procedural, technology, accessibility, or prompt-security failure is established.
